

# CREATIVE DIGITAL SOLUTIONS

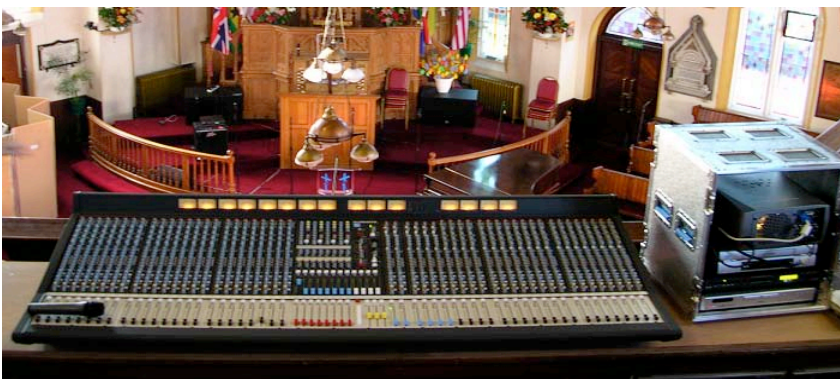

CREATIVE at work

New Testament Assembly, SW17

## Creating the Complete Solution

The main church showing six flown Electrovoice SX300 speakers with two 2 x 18" subwoofers below – powered and controlled by EV and DBX amplification and processing. The mounted screen demonstrates the effectiveness of over 4000 lumens projected from the balcony via a long throw lens.

An Allen & Heath ML4000 48 Channel Mixing Console is the nerve centre for the audio system. Offering VCA and Group Busses, LCR Control, Matrix Outputs, 12 Monitor Auxiliaries and PC Snapshot Memories, it ensures maximum control, creativity and above all – pristine sound quality.

At the New Testament Assembly Church, SW17, Creative Digital Solutions were commissioned to supply and install probably the most advanced and comprehensive installation within a Church in the United Kingdom. With the support of many of the leading manufacturers in audio, audio-visual and reprographics, Creative were able to offer the complete solution to assist this prospering Church to further growth and development in all areas of Worship and Ministry. Here we examine the many facets of this installation and assess the benefits of Churches using one forward thinking company to supply the complete solution for all their future requirements.

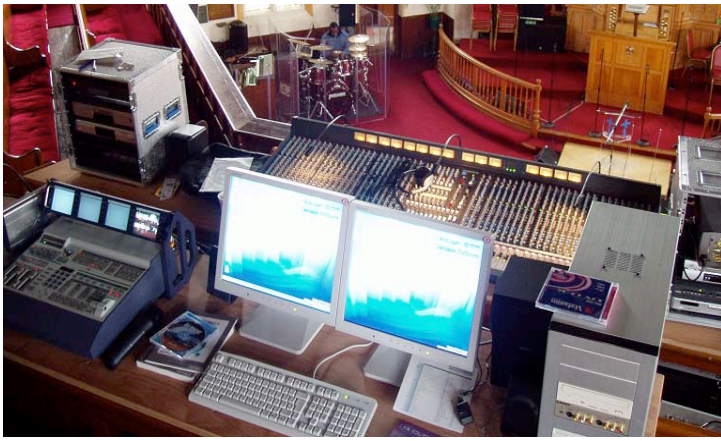

The Ricoh-Nashuatec DSM635 digital copier complete with 15-page booklet folding finisher for producing cost-effective newsletters as well as to complete day-to-day office duties. Upgradeable to full network multifunctional capability – printing, scanning, faxing & copying.

With such an advanced audio-visual system in place, NTA wanted to be able to produce and distribute their own DVDs. Here you can see the Datavideo SE-800 vision mixer (used to monitor and record the various camera inputs to hard disk) linked to a custom designed recording and editing suite using Adobe Premiere and DVStorm software. Below is a Sony remote camera discreetly installed for close-ups of Baptisms and on-stage Ministry. Two further 'roving' semi-professional DV cameras were supplied to cope with all other requirements. Custom AV optimised laptop installed with Songpro V4 song management software also shown.

And it doesn't stop here! As well as 12 rear TV monitors linked to the projection system, 10 Dynacord M12 stage monitors and an array of microphones for picking up the steel band, choir and ambient sound, the NTA installation is about to enter it's final stage with the addition of rear speakers to produce true 6.1 surround sound and in ear monitoring. With these additions the system is ready for the many demanding conferences and services that take place in this Church every year.

## CREATIVE at work

**B**efore any installation takes place, whether it is for Reprographics, PA, Audio-Visual or IT, we ensure that the system specified will meet and exceed your current and projected requirements. This means that after our initial discussions and on-site meetings we insist on a further visit from our head engineer to make sure that the system we recommend will fulfil all specified criteria. We take pride in recommending the finest equipment available from such manufacturers as Nashuatec, Sennheiser, Allen & Heath and Electrovoice – all leaders in their respective fields – but we also aim to offer a cost-effective solution by walking the tight rope between quality and value for money.

Dedicated training by Creative & Martin Daley of Allen & Heath on the ML4000 mixing console. Training is almost as important as the system itself – ensuring that you are left in control of the new system and are confident in getting the most out of all the equipment.
